Product Update

NEW

PVC-u Hardnose™ XT

Retains all the existing benefits of XT with the addition of new features that offer improved performance including use in areas where more intensive cleaning is required e.g. healthcare & education applications.

- Inserts available in Interior & Xtra-Grip
- New unique mechanical locking mechanism secures insert in place
- Incorporates a slip-resistant insert that extends around the leading edge of the profile in line with BRE recommendations
- Ideal for use with Gradus Grip (GG290) ultra strong stair edging adhesive

See pages 41 - 42

NEW

Mono-Clip® System

Features a range of profiles in wood-effect finishes for use with wood and wood laminates, ideal for use in medium traffic environments e.g. offices and restaurants.

- Tops available in ramp, twin top and border configurations
- Choice of 2 base sizes
- Tops can be clipped into bases at variable heights to accommodate a wider range of floorcovering

See pages 96 - 97

LED Architectural Lighting

Our LED Architectural Lighting range is centred around providing clients with the ability to transform an environment with subtle accents or striking features to create a real "wow" factor. This incredibly versatile range offers solutions to suit a range of applications across a wide variety of different sectors.

- Comprehensive range of profiles available to suit a variety of common applications
- 4 types of LED Tapes in a wide choice of colours
- Controller options also available
- Profiles come supplied with base, diffuser cover, end caps and fixing clips

See pages 62 - 65

Why Gradus

Gradus is the market leader in contract flooring accessories and offers the widest choice in product solutions for stairs and floors.

All our products are designed to ensure the correct balance between safety, performance and aesthetics and are suitable for a wide variety of contract applications.

Services

The Gradus Knowledge:

CPD - Gradus offers comprehensive RIBA assessed CPD seminars covering specification, legislation, safety, performance and aesthetics.

Seminar - An informal opportunity for Gradus to bring an exhibition of products directly to you. Flexible and informative, they can be arranged at a date and time to suit you. See page 169 for more information.

Measuring Service

Take the hassle out of the job and let Gradus provide accurate stair edging measures, saving you time and money.

Website

Visit www.gradus.com to access all of our products and services.

Fabrications

When projects aren't straightforward, we can help customise many of our products to ensure a solution that fits.

Samples

Call Gradus or build a design board online and get all the samples you need within 24 hours.

Tel: 01625 428922

or email: imail@gradus.com

Quality

- 10 year warranty against manufacturing defects under normal use and service, subject to materials being installed and maintained to our recommendations. Additional terms & conditions apply – details available upon request. Look out for products that carry the 10 year warranty
- ISO 9001 Quality Management accredited company
- ISO 45001 Occupational Health & Safety

Design

- Safety: products are developed with safety at the forefront of design.
 All stair edgings and floor trims effectively contribute to a reduction in slip and trip accidents
- Performance: extensive research and testing to ensure durability and appearance retention throughout a product's life
- Aesthetics: a variety of colours and finishes ensure harmonisation with interior designs and allow visual contrast to be achieved where relevant
- In-house product design and development

Sustainability

- ISO 14001 Environmental Management accredited company
- Our pledge is 'To meet our present business needs without compromising our long term future'
- We have a firm set of environmental objectives allowing us to focus on raw material selection, legislation, waste reduction, training and recycling

REACH

- REACH stands for Registration, Evaluation, Authorisation and Restriction of Chemicals. As of 1 January 2021 the UK REACH and the EU REACH regulations operate independently from each other.
- Gradus products do not contain any substances currently classified as Substances of Very High Concern (SVHC) at a concentration greater than 0.1% as declared against both the EU and UK Candidate Lists.
- If you have any specific concerns regarding the composition of a particular product, contact Gradus Technical Support.

Knowledge

- Member of the Contract Flooring Association (CFA)
- Registered member of the RIBA CPD Providers Network
- Technical Support
- Member of NBS Source
- Network of trained specification consultants

Section 1

Stair Edgings & Complementary Trims

Providing the most extensive range in the UK, Gradus stair edgings can help to reduce accidents on stairs as well as helping to provide an inclusive environment giving access to all building users.

Why use a stair edging?

- Reduce accidents on stairs by:
 - Providing slip-resistance at the edge of the step

 Providing a visual contrast to highlight the edge of the step
- ✓ Protect the step edge and surrounding floorcoverings
- Reduce maintenance costs
- ✓ Improve the aesthetics of a building
- Comply with the guidance in

Approved Documents K and M of The Building Regulations 2010, BS 8300-2:2018, BS 9266:2013 and BS 5395-1:2010 in line with the Equality Act 2010

Follow our 3 step guide to selecting the correct stair edging, see pages 11 to 15

the risk!

Don't take

Step 1

Choose the right stair edging and fixing method for the step

Specification Guidelines

BS 8300-2:2018 refers to research undertaken by BRE. This research shows that if the depth of the tread is less than 300mm the risk of an overstep is increased. A stair nosing that **wraps around the riser** will reduce this risk by increasing the slip-resistance at the step edge.

Gradus stair nosings offer a wide range of profiles that satisfy all the latest building standards and guidelines and accommodate a wide range of floorcoverings.

XT range

Traditional range

Elite range

Trans-Edge range

Step 1 continued

Shape of Step

Select the correct stair nosing for the shape of the step – this should be a tight fit to the step to ensure that the profile does not lift or rock during use. There are four main stair nosing shapes to choose from (see below). Kinked face profiles can be used on square and some rake back stairs.

Square

Rake Back

Kinked Face

Bullnose

The depth of the tread (going) will also have an influence on the stair nosing selected. A study conducted by BRE found that slips on stairs are often as a result of an overstep, especially on narrow treads (less than 300mm). To help reduce the risk of slips in an overstep situation, the XT stair nosing range incorporates a slip-resistant insert that extends around the leading edge of the

profile in line with BRE recommendations.Gradus offers a wide range of profiles to suit different tread

Single Channel

sizes:

 Single channel – ideal for use on treads up to 300mm deep

Wide, Double & Multiple Channel

- Wide, double and multiple channels suitable for stairs with a large going, especially if they are subject to heavy volumes of foot traffic e.g. railway stations, supermarkets, department stores, secondary and further education establishments and major hospitals.
- When specifying double channel stair edgings, both inserts should be of the same colour and be of a contrasting colour to the surrounding floor finish.
- When specifying multiple channel stair edgings the front insert should always be in a visually contrasting colour to the remaining inserts to ensure definition of the step edge. The remaining inserts must always be of the same colour and ideally match the surrounding floorcovering.

Gauge

The gauge (thickness) of the stair nosing should be a flush finish to the floorcovering to avoid a trip hazard being created. When used with soft floorcoverings such as carpet and carpet tile, the gauge should achieve a flush finish with the compressed thickness of the floorcovering.

Gradus offers a range of gauges to suit the majority of commercial floorcoverings (see below).

Gauge	Typically used with					
Ramp back	No floorcoverings / Resilient floorcoverings - install profile on top of the floorcovering to ensure a safe fit					
2mm – 3mm	Resilient floorcoverings					
4mm – 5mm	Carpet / Carpet Tile / Resilient floorcoverings with a bevelled underlay (see page 54) in heavy use areas					
6mm	Carpet / Carpet Tile					
7mm – 10mm	Carpet / Wood / Ceramics / Other heavy duty floorcoverings					
10mm – 15mm	Ceramics / Stone / Marble					

A secure fixing between the stair edging and the step is essential to ensuring a safe installation. The stair edging profile, type and condition of the substrate and the application will affect the type of fixing method required.

Adhesive only fixing - Gradus Grip

A specialist adhesive designed to securely bond stair edgings, eliminating the need for screws and screw head cover plugs, providing a neater finish. The Gradus Grip adhesive bond is available with a 10 year warranty.

Mechanical and adhesive fixing

A combination of screw fixings, cartridge adhesive and screw head cover plugs are used to achieve a secure fixing.

To ensure the correct installation method is selected further information can be found in our installation instructions, visit www.gradus.com

Download the NBS at www.gradus.com

Ultra strong bond

Have you

Step 2

Select the correct slip-resistance for the conditions

Specification Guidelines

BS 8300-2:2018, BS 5395-1:2010 and BS 9266:2013 refers to the slip-resistance of surface finishes on stairs. A pendulum test is used to assess slip-resistance and a Pendulum Test Value (PTV) of greater than 36 is required in both dry conditions and also when the stairs are at risk of becoming wet through walked in moisture and spillages.

Slip-resistance & Performance

An insert provides a surface that creates friction between the sole of the shoe and the step edge, hence providing slip-resistance and reducing the risk of slips on stairs. All Gradus inserts are tested for slip-resistance – see results on page 159.

Ensure the required level of slip-resistance is achieved to reduce the risk of slips and falls on stairs by **selecting the correct insert for the environment**:

- Interior installations not always dry conditions. Consider whether there is a risk of the stair nosing becoming wet and select the correct insert accordingly.
- Safety flooring select an insert that matches or improves the slip-resistant qualities of the flooring.

Insert Type	ype Conditions Applications		Material	Stair Edgings			
Xtra-grip Interior Wet Interior Dry		Increased surface roughness where the stair edging may become wet e.g. stairs close to entrances or where safety flooring is used. Areas where health and safety are a priority e.g. schools and hospitals.	Pvc with mineral aggregate.	XT (pages 21-22, 41-42) Traditional (pages 25-31, 37-39, 43-45)			
Xtra-grip Plus Interior Pry bond system for areas		As Xtra-grip, with the addition of an enhanced insert bond system for areas subject to more frequent cleaning e.g. catering and food preparation areas.	Pvc with mineral aggregate.	Traditional (pages 25-31, 37-39, 43-45)			
Interior	Areas where there is no risk that the stairs will be contaminated by moisture.		Pvc with mineral inclusion - standard or grained surface.	XT (pages 21-22, 41-42) Elite (pages 23-24, 38) Traditional (pages 25-31, 37-39, 43-45)			
EVICTOR		Everyday outdoor use e.g. car park entry / exit steps.	Glass reinforced polyester with fused alumina.	Traditional (pages 25-31, 38-39)			
Heavy Duty Exterior	Interior environments e.g. motorway toot pridges railway		Glass reinforced polyester with fused alumina (TEX).	TEX range (page 33)			

Step 3

Choose a colour that visually contrasts

Specification Guidelines

BS 8300-2:2018, BS 5395-1:2010, BS 9266:2013 & Approved Documents M (ADM) & K (ADK) of The Building Regulations 2010 highlight the need to ensure there is sufficient visual contrast at the step edge, providing a safe environment for all building users.

Project Rainbow and ADM recommend that there is at least a 30 point difference between the LRVs of the stair nosing and floorcovering to achieve a suitable contrast.

All Gradus stair nosing channel and insert colours are measured for LRVs in accordance with BS 8493:2008+A1:2010 to help achieve this difference. Gradus PVC-u Hardnose stair nosings can be selected with the channel and insert in the same colour to provide the ideal solution for creating visual contrast (picture 1), in line with Approved Documents M & K, BS 8300-2:2018, BS 5395-1:2010 and BS 9266:2013 guidelines.

Good Visual Contrast Installed with Gradus Stair Nosings picture 1

Poor Visual Contrast No Stair Nosings – Don't Take the Risk

It is important to achieve a tonal contrast between the floorcovering and the stair nosing as people with visual impairments may not be able to see some or all colours but can perceive light and dark. The photographs below show that colour contrast (picture 1) visible to fully-sighted people may not always offer a tonal contrast (picture 2) for partially-sighted people.

Fully-sighted People Tonal Contrast picture 1

Partially-sighted People Poor Tonal Contrast picture 2

Stair Edging Colours

The range of stair edging colours from Gradus provides a comprehensive solution allowing specifiers and users to achieve visual contrast in line with recommendations in The Building Regulations 2010 - Approved Documents K & M, BS 8300-2:2018, BS 9266:2013 & BS 5395-1:2010 and BRE IP15/03 (see pages 162-168).

The colours have been developed to provide a wide choice of visual contrast with matching colours for both insert and Hardnose channel. All colours have been measured for light reflectance/visual contrast (LRV using the CIE Y value).

For guidance on selecting matching channel and insert colours that provide visual contrast on both the tread and riser, see pages 160-162. For channel and insert availability by range see individual profile pages.

Please note: Due to the limitations of the printing process, colours within this catalogue should not be relied upon for colour matching. An accurate colour match can only be achieved by requesting the relevant product sample(s) from Gradus Technical Support on 01625 428922.

Trans-Edge® - Stair Edgings

A range of heavy-duty aluminium stair edgings incorporating an extremely durable, slip-resistant insert material, suitable for external and internal applications such as motorway foot bridges, railway stations, airports, sports stadia, outdoor arenas and heavy industry. Selected TEX stair edgings can also be used with tread plates and sheet material to form a heavy-duty stair and floor system - see pages 34 to 35.

Installation Advice:

- TEX3R the front insert should always be in a visually contrasting colour to the remaining inserts
 to ensure definition of the step edge. The remaining inserts must always be of the same colour
 and ideally match the surrounding floorcovering. The colours selected must contrast by 30 points
 on the LRV scale see page 17 for insert LRVs.
- TEXE1 multiple pieces of TEXE1 can be joined together to increase slip-resistance along the tread depth. When using two or more TEXE1 extension profiles, these should be a contrasting colour to the stair edging insert to ensure step edge definition.

Information:

- For guidance on the correct selection of stair edgings see pages 10 to 15.
- For larger colour swatches, Light Reflectance Values (LRVs) and NCS references see pages 16 to 17.

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

Trans-Edge® - TEX range

Trans-Edge® - Stair & Floor System

The Gradus Heavy-Duty Stair & Floor System offers a hard wearing solution to help reduce the risk of slips and trips in the most demanding environments. For use in both interior and exterior environments, this system features stair edgings and tread plates for use on stairs and sheet material for use on landings and walkways. These products can be used together to provide a slip-resistant flooring solution. Ideal for use in new build applications as well as refurbishment projects.

Installation Advice:

- Installed using adhesive and stainless steel screws (fixings not supplied/screw head covers not available).
- Stair edging insert colours for TEX11 and TEX51 should be selected to provide a 30 point LRV difference with the tread plate.

Information:

- For guidance on the correct selection of stair edgings see pages 10 to 15.
- For larger colour swatches, Light Reflectance Values (LRVs) and NCS references see pages 16 to 17.

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

Trans-Edge® - Tread Plate & Sheet

Tread Plates and Sheet:

- Tread plates (TEXPL) are supplied routed to provide a safe, neat junction with the stair edging
- TEXSH (sheet) is available routed if being used on a landing in conjunction with a TEX stair edging
- Installed using adhesive and stainless steel screws (fixings not supplied/screw head cover plugs not available).

Colour options:

TEXPL & TEXSH:

Charcoal LRV: 4.07

Chrome & Bronze - Stair Edgings

Chrome & Bronze stair edgings offer premium finishes for prestigious locations.

Chrome stair edgings offer an attractive, contemporary finish and are suitable for light to medium traffic interior applications. Features chromed aluminium channels with slip-resistant inserts.

Comprising of polished manganese bronze channels with slip-resistant inserts, Bronze stair edgings are ideal for use in prestigious locations such as theatres, banks & hotels, and are suitable for both interior & exterior heavy traffic.

Guide to Stair Trims & Welded Corners

Description

Welded corners are designed to form a neat and attractive edge around the open end of a step by concealing the edge of the floorcovering and stair edging.

Welded corners are supplied pre-welded to suit the angle between the riser and tread of the step (78°-90°). They are available in a variety of gauges to suit different floorcoverings. Welded corners are available with either a fixed flange or separate fixing clips as shown on the opposite page. When selecting the appropriate welded corner the thickness of the screed, the floorcovering and the combined thickness of the stair edging riser and floorcovering must be considered to ensure a neat finish. Profiles are also available in longer lengths to be used as trimming strips on landings etc.

For details on XI side trims and welded corners refer to page 52 (Aluminium and PVC-u Hardnose).

4 Designs to Choose From

Welded Corner with Fixed Flange

Welded corners are fabricated using a trimming strip of the correct gauge to suit the thickness of the floorcovering. Different types of trimming strip can be combined on the tread and riser to accommodate the combined thickness of the floorcovering and riser of the stair edging e.g. TA5B (tread)/TA5 (riser). Welded corners are fixed with a proprietary cartridge adhesive.

Note: the use of a latex screed to disguise the fixing flange may be required when using vinyl or linoleum (see page 50).

Welded Corner with TC1 Clips

HT42, HXT42, MT42, TA42, TAC42 and TAXT42 all use the TC1 clip which is adjustable to provide an upstand of 6mm, 8mm or 10mm on the tread or riser. The clip is positioned in one of the grooves using two clips per tread and one per riser and the side trim is then fixed on with proprietary cartridge adhesive. When this has cured the clip is removed. Different clip positions can be used on the tread and riser to allow for the combined thickness of the floorcovering and riser of the stair edging (see page 51).

Welded Corner with TC2 Clips

TA50, TA66 and BT42 all use the TC2 clip which is made from spring steel and is used in approximately the same positions as TC1 but is left in position after the proprietary cartridge adhesive cures (see page 51).

Welded Corner with TC3 Clips

TAXT5212 and TAXT523 utilise aluminium TC3 clips that slide on to the profile using the locating grooves to form the flange. The clips provide a gauge of either 10mm, 12.5mm or 15mm to work with CXT1, CXT2 or CXT3 stair edgings. The TC3 fixing clips (tabs) remain in place once the side trim has been installed (see page 52).

Gradus Accessories offers a **Free Measuring & Templating Service** for stair edgings to ensure optimum product selection. Contact Technical Support on 01625 428922 to request your measure (terms and conditions apply).

Welded Corners and Trimming Strips with TC2 Clips

Side Trims and Welded Corners for XT Stair Edgings

TAXT42 with contoured edge to provide a flush, neat finish to the stair edging profile

Side trims and welded corners are designed to form a neat and attractive edge around the open end of a step by concealing the edge of the floorcovering and stair edging.

Gradus side trims TA42, TA5B, HT42, HT44 and HT47 can be ordered in straight lengths for on-site fabrication or can be supplied as pre-formed welded corners TAXT42, TAXT5B, HXT42, HXT44 and HXT47. When ordered as TAXT42 / TAXT5B / HXT42 / HXT44 / HXT47 the apex of the welded corner is contoured to a rounded edge to match the curved edge design of the XT stair edging profiles, providing a flush, neat finish.

Welded Returns & Capped Ends

Most stair edgings featured in the Gradus product range can be fabricated to form a neat finish to the open side(s) of the stair in the form of welded returns or capped ends. The diagram below illustrates some examples of the fabrications that are available.

Gradus Accessories offers a **Free Measuring & Templating Service** for stair edgings to ensure optimum product selection. Contact Technical Support on 01625 428922 to request your measure (terms and conditions apply).

Stair Trims

TA9

TA9 is an aluminium trimming strip used with G range stair edgings to form a safe ramp where resilient or no floorcovering is used (see pages 28 to 30).

Edge Trim

Diagram shows G11 (see page 28) with TA9 ramping strip providing a transition where no floorcovering is used.

TA6 is an aluminium trimming strip used to form a central run of resilient floorcovering on stairs and landings. It can also be used on the riser.

Diagram shows AS11 (see page 25) and TA6 trimming strip with a special on-site fabrication.

Bevelled Underlay

Bevelled underlay is a flexible pvc material used as a diminishing strip and is ideal for building up resilient floorcoverings for use with 5mm stair edgings. This is an ideal solution where a heavy-duty stair edging is required with a resilient floorcovering.

Grooves along the length of the underlay provide a straight cutting edge at points where the thickness gives ideal height adjustment. Bevelled underlay is fitted with a proprietary contact adhesive and it is advisable to feather the tapered edge with a thin layer of latex cement.

Diagram shows BU200 bevelled underlay being used to build up a 3.2mm linoleum to ensure a flush finish with the back edge of a G11 stair edging (5mm gauge - see page 28).

Colour option:

Black

Stair Trims

Aluminium or bronze nap trims available with or without carpet gripper. Butt joint to the back edge of the stair edging to form a neat finish to the floorcovering. Ideal for use where an Axminster or other woven backed carpet is used. The top is closed using a block of wood and/or rubber mallet. Fixed with screws and adhesive.

Nap Trim

BCT16

Bronze - available with or without carpet gripper

Diagram shows BCT16 butt jointed to the back edge of BG511 (5mm gauge - see page 39) stair edging to provide a neat edge to the carpet.

ANT355

Aluminium - available with or without carpet gripper

Diagram shows ANT355 butt jointed to the back edge of G11 (5mm gauge - see page 28) stair edging to provide a neat edge to the carpet.

CG1042

Aluminium - available with or without carpet gripper

Diagram shows CG1042 butt jointed to the back edge of CT71 (gauge 7mm see page 31) stair edging to provide a neat edge to the carpet.

A co-extruded PVC-u feature strip for use between carpets, resilient floorcoverings and ceramic tiles or to form an edge to a floorcovering (see diagram).

Square Edge

PET276

Co-extruded pvc top with PVC-u base

Diagram shows PET276 in conjunction with RN711 (gauge 6mm - see page 44) with a special on-site fabrication being used to protect the exposed edge of the carpet and form a 'carpet runner'.

Specialist LED Lighting Systems

With over 25 years experience in the design and manufacture of specialist LED lighting, Gradus offers a comprehensive range of low voltage decorative and safety LED lighting solutions ideal for use across a variety of sectors and applications.

Range overview

LED Architectural Lighting

Centred around providing clients with the ability to transform an environment with subtle accents or striking features, this range is geared towards those looking for a decorative LED Lighting solution that is sure to create a real "wow" factor.

••••••••••

See pages 62-65

LED Step Lighting

Gradus offers a range of safety and decorative lighting profiles for stairs. Profiles have been designed specifically to suit dark interior environments, where light is required for safety but should not detract from the primary function of the installation.

See pages 66-69

LED Aisle & Floor Lighting

A comprehensive range of PVC-u and aluminium aisle and floor trims that are designed for use as cable management systems to illuminate floors, walkways, aisles and exit/entrance routes. Profiles can feature Interlok Advance, Continuity or Loom Lighting.

See pages 70-71

LED Wall Lighting

Provides soft illumination way-finding for auditoria access areas during showings or performances, without distracting from the primary function of the installation.

See page 72

LED Row Indication

Gradus step row indicators are used to identify seating rows in auditoria, such as cinema, theatres and lecture theatres in darkened conditions.

See page 73

LED Continuity Lighting

An excellent alternative to neon lighting for use within interior applications. This system features a similar light output and brightness to neon, whilst offering the benefits of extra low voltage, low power consumption and a long life cycle.

See page 74

Specialist LED Lighting Systems

Gradus LED Lighting Systems can be installed in a wide variety of applications, spanning across multiple sectors.

NEW LED Architectural Lighting

Centred around providing clients with the ability to transform an environment with subtle accents or striking features, this range is geared towards those looking for a decorative LED Lighting solution that is sure to create a real "wow" factor.

Our versatile range of commercial grade LED tapes are easy to install and are available in a wide choice of colours, types and brightness options.

The range can be split into 3 key areas, all of which will require careful consideration to ensure that the chosen overall solution meets the specific project needs from both a visual and practical point of view:

- Aluminium Profiles
- LED Tapes
- Controllers

If you have a project that could benefit from LED Lighting or require further details, call 01625 428922 to discuss with a member of our specialist team.

LED Tapes

Traditional LED Tapes

- Available in a selection of Whites and Single Colour options
- 10w, 24v DC
- IP20 as standard (IP65 Splashproof versions also available)

Spotless LED Tapes

- Available in a selection of Whites and Single Colour options
- 10w and 15w, 24v DC

IP20 as standard (IP65 Splashproof versions also available)

Colour Changing LED Tapes

- Available in RGBWW (Warm White 3000k) and RGBW (Cool White 6000k)
- 20w, 24v DC
- IP20 as standard (IP65 Splashproof versions also available)

Dual-White CCT LED Tapes

- Create any shade of white within colour temperature range of 2700k-6500k
- 24w, 24v DC
- IP20 as standard (IP65 Splashproof versions also available)

Controllers ·

Gradus can provide control solutions to suit all the LED Tapes featured within our new LED Architectural Lighting Systems range, including RF (radio-frequency) control and ZigBee compatible options.

For more complex lighting installations, we can also supply controller solutions compatible with the following communication protocols:

Triac

Our Gradus Contracts Team will work closely with clients to understand your individual project needs to ensure the best possible overall package is selected.

LED Step Lighting

Gradus offers a range of safety and decorative lighting profiles for stairs. Profiles have been designed specifically to suit dark interior environments such as auditoria, where light is required for safety but should not detract from the primary function of the installation. By utilising LED technology, the system offers an extra low voltage (12v) alternative to mains voltage lighting.

Visit www.gradus.com for full product details.

Interlok Advance™

Interlok Advance is an LED lighting system that offers a pinpoint lighting effect that is created using circuit board strips with LEDs spaced at 50mm or 100mm intervals.

Continuity™

An LED lighting system that offers a continuous linear lighting effect for a modern finish in low light environments. A fibre optic rod that is end-illuminated with high intensity LEDs (IP44).

LED Step Lighting

PVC-u Profiles

- Clear profile allows light to project through
- Illuminated stair edging is visible when ascending & descending the staircase

LED Step Lighting

Aluminium Profiles

- Light is projected directly from the tube
- The angle at which the illumination is visible depends on the profile design

LED Lighting Systems Additional Services & Support

At Gradus one of our key business goals is to provide peace of mind for all our customers through quality, performance and a service that you can rely on. Our Contracts team manage the entire process to tailor quotations and orders to the specific needs of each individual project. Below details the additional services and customer support that Gradus can offer to clients across our full range of LED Lighting Systems.

Specification Consultants:

Provide face to face advice when specifying lighting, ensuring that the products selected are matched to the specific requirements of the environment. We also have a wealth of knowledge and experience within our Contracts Team who are more than happy to share their expertise with clients.

Dedicated Estimating Service:

Available on a supply only basis or for both supply and installation. Gradus also have online project collaboration capabilities.

Site Survey capabilities:

For supply & fit projects, Gradus can arrange a full survey and liaise with other trades to ensure complete peace of mind for the customer.

Supply and Fit package:

Ensures a convenient and reliable service throughout the specification, survey and installation process.

Trained and experienced technicians carry out the installations in line with Gradus quality systems, in accordance with current standards.

Electrical installations carried out and tested in accordance with BS7671 wiring regulations.

To take advantage of the supply and fit service, contact Gradus' specification consultants who will undertake an evaluation of the requirements from which a detailed quote can be prepared. Details of specification consultants are available from:

Gradus Technical Support on +44 (0) 1625 428922 Applicable to UK only.

Section 3

Transition Strips

Information to ensure the correct selection of transition strips along with details of colour availability. Details of all Gradus transition strips and specialist floor trims can be found in this section.

Transition Strip Colours

Please note: Due to the limitations of the printing process, colours within this catalogue should not be relied upon for colour matching.

An accurate colour match can only be achieved by requesting the relevant product sample(s) from Gradus Technical Support on 01625 428922.

Colour Availability

The table below can be used to show colour and finish availability of various profiles. Non-standard colours are also available and special colours can be matched upon request subject to minimum quantity and lead time. For further information contact Technical Support on 01625 428922.

Luxury Trim System

Description

The Gradus Luxury Trim System offers a premium solution for the neat finishing of junctions between flooring materials.

The solid brass profiles are available in six opulent metal finishes for use in prestigious applications where luxury floor finishes are installed, from hotels to top-end residential developments.

The profiles are available in either a ramp or a twin top configuration with a choice of bases and heights to suit a wide range of floorcoverings.

Profile Information

- Profiles suitable for interior use
- Tops clip in to bases to accommodate a variety of floorcoverings

Installation Advice

- Compressed thickness of carpet should always be a tight fit to the internal gauge of the combined top / base
- When installed with natural floorcoverings e.g. ceramics or wood, a suitable gap must be left between the profile base and the flooring to allow for natural expansion
- Bases should always be fitted on top of resilient floorcoverings when used in a ramp configuration
- Bases should be fitted using cartridge adhesive and screw fixings

Colour

For larger colour swatches see page 78

MTS Multi-Trim System™

Edmund Sumner/View.

Description

MTS Multi-Trim System is a versatile and simple solution for common interfaces between flooring materials.

Tops are aluminium or PVC-u and can be clipped into the bases at different heights to accommodate various floorcoverings, offering more flexibility in use.

MTS offers a neat finish to commonly found junctions in commercial applications, and is ideal for use with floorcoverings that require room for expansion such as wood, wood laminate, ceramics and terrazzo. Suitable for use in medium pedestrian and trolley traffic applications, e.g. high street shops, schools, hotels and offices.

Profile Information

- Profiles suitable for interior use
- Tops can be clipped into bases at variable heights to accommodate a wider range of floorcoverings

Denotes PVC-u profiles can be curved on-site, see individual profiles for minimum radius

Installation Advice

- Compressed thickness of carpet should always be a tight fit to the internal gauge of the combined top / base
- When installed with ceramics, wood or wood laminate flooring a suitable gap must be left between the profile base and the flooring to allow for natural expansion
- Bases should be fitted using cartridge adhesive and screw fixings

Colour

 For larger colour swatches and LRV readings for MTS PVC-u see page 78

Clip-Top™

Description

Clip-Top is a two-piece product allowing design flexibility in commercial applications. The tops can be replaced so that the colour can be altered as part of a refurbishment programme, or if a worn or damaged section needs to be changed, without renewing the base or disrupting the fitted floorcovering. Suitable for use in heavy pedestrian and medium trolley traffic applications, e.g. department stores, high street shops, hospitals, schools, hotels and offices.

The Dementia Services Development Centre at the University of Stirling have undertaken a review of the Gradus Accessories products and have rated its design in relation to dementia design principles and it's usability within a dementia inclusive environment.

For further information see pages 174 to 175 or visit www.gradus.com

Profile Information

- Tops can be replaced
- Profiles suitable for interior use only

A number of PVC-u/metallic PVC-u tops and aluminium bases can be factory fabricated to a radius shape, subject to approval of template or detailed drawing (showing radius details), by the Technical Department

Details of minimum and maximum curving radii can be found on the opposite page

Installation Advice

- Compressed thickness of carpet should always be a tight fit to the internal gauge of the combined top / base
- Clip-Top bases should always be fitted on top of the resilient floorcovering when used in a ramp configuration
- Bases should be fitted using cartridge adhesive and screw fixings

Colour

• For larger colour swatches and LRV readings see page 78

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

Curving Clip-Top

Curves between the minimum and maximum radii can be factory fabricated subject to approval of template or detailed drawing (showing radius details) by the Technical Department. Curves greater than the maximum radius can be curved on-site or by Gradus on request. Curves less than the minimum radius cannot be curved.

Clip-Top fx®

Description

Clip-Top fx is a two-piece product allowing design flexibility in most commercial applications. Tops are PVC-u and bases are PVC-u for curves and aluminium for straights. The product can be easily formed on-site without the need for heat application, reducing the requirements for pre-fabricated curves. The tops can be replaced so that the colour can be altered as part of a refurbishment programme, or if a worn or damaged section needs to be changed, without renewing the base or disrupting the fitted floorcovering. Suitable for use in medium pedestrian and trolley traffic applications, e.g. high street shops, schools, hotels and offices.

Profile information

- Tops can be replaced
- Profiles suitable for interior use only

Can be easily formed on-site without the need for heat application when used with PVC-u bases. See individual profiles for curving radii

Installation Advice

- Compressed thickness of carpet should always be a tight fit to the internal gauge of the combined top / base
- Clip-Top fx bases should always be fitted on top of the resilient floorcovering when used in a ramp configuration
- Bases should be fitted using cartridge adhesive and screw fixings

Colour

For larger colour swatches and LRV readings see page 78

Clip-Top fx PVC-u bases contain up to 100% recycled content

 Clip-Top fx® UK/EU Registered Design no 9/000007067-001 – 9/00007067-003

Clip-Top fx®

PVC-u bases are pre-punched with tabs and fixing holes for on-site curving. Latex screed should be used with resilient floorcoverings to prevent pre-punched base shadowing through.

Aluminium bases have a solid flange for straight lengths.

Design-Clip

Description

Design-Clip comprises two-piece aluminium profiles that provide a neat finish at junctions between hard floors such as luxury vinyl tile, wood and wood laminate. The profiles allow room for expansion in natural floorcoverings.

Profile Information

- Profiles suitable for interior use in medium traffic applications
 e.g. restaurants, hotels and offices
- Tops are clipped into bases at variable heights to accommodate a variety of floorcoverings
- Bases are supplied pre-drilled with countersunk holes for no.4 screws

Installation Advice

- Bases should be fitted using cartridge adhesive and screw fixings
- When installed with floorcoverings that require room for natural expansion, a suitable gap must be left between the profile base and the floorcovering to allow for that expansion

Colour

• For larger colour swatches see page 78

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

PPS® System

Description

The PPS range comprises two-piece anodised aluminium profiles that provide solutions to junctions for flooring such as wood, wood laminate and ceramic tiles. The PPS system utilises aluminium bases and tops joined together with a unique patented linking screw which allows the profiles to accommodate various heights of floorcoverings. The profiles allow room for expansion of natural floorcoverings such as wood whilst offering greater flexibility in height options.

Profile Information

- Profiles suitable for interior use in medium traffic applications, e.g. offices and restaurants
- Tops are screwed into bases at adjustable heights to accommodate a variety of floorcoverings

Installation Advice

- Bases should be fitted using cartridge adhesive and screw fixings
- When installed with floorcoverings that require room for natural expansion, a suitable gap must be left between the profile base and the floorcovering to allow for that expansion

NEW Mono-Clip® System

Description

Mono-Clip is a range of two-piece profiles available in wood-effect finishes for use with wood and wood laminates. The profiles allow room for expansion in natural floorcoverings.

Profile Information

- Tops are available in 3 configurations ramp, twin top and border
- Choice of 2 base sizes
- Profiles suitable for use in medium traffic environments e.g. offices and restaurants
- Tops are clipped into bases at varying heights to accommodate a variety of floorcoverings

Installation Advice

- Bases should be fitted using cartridge adhesive and screw fixings
- When installed with the floorcoverings that require room for natural expansion, a suitable gap must be left at the profile base and the floorcovering to allow for that expansion

Trans-Edge® - Trims

Description

Trans-Edge trims have been designed for use in the most demanding environments where frequent heavy foot and wheeled traffic can be expected, e.g. railway stations, airports, transport interchanges, department stores and hospitals. Trans-Edge trims comprise an aluminium base channel with a choice of slip-resistant Elite inserts (ordered separately). Standard interior insert is available for interior dry conditions. Xtra-grip insert is available for interior areas that are at risk of becoming wet and therefore pose a higher risk of slip.

Profile Information

- Profiles suitable for interior use
- Choice of ramp or flat design

Installation Advice

- Aluminium channels are fixed using screws and cartridge adhesive. Elite insert is then fitted into channel to allow concealed fixings
- If used with carpet, compressed thickness of carpet should always be a tight fit to the internal gauge of the profile
- When installed with ceramics, wood or wood laminate flooring a suitable gap must be left between the profile and the flooring to allow for natural expansion
- Ramp profiles should always be fitted on top of resilient floorcoverings

Colour

Matwell Frames

Description

Matwell frames are available in two options: recessed – for the creation, protection and finishing of a recess in the subfloor that is used to accommodate a primary barrier mat; ramped – for the creation of a surface matwell to secure and provide safe transition for a mat that is laid directly on top of the floor.

Profile Information

- UMFA and FRB profiles can be pre-drilled (upon request) and are available in a variety of heights to suit different gauges of barrier matting
- Ramping frames are suitable for use with 12mm primary barrier mats (not suitable in areas subject to heavy trolley traffic)
- Frames can be mitred or shaped subject to provision and approval of template

Installation Advice

- Recessed frames should be mechanically fixed to the subfloor prior to the screed or plywood build up of the matwell base to suit the matting to be installed. Frames should be fixed to the correct levels taking into account the finished floor level and surrounding floor finish
- Ramped frames aluminium ramps should be fixed using cartridge adhesive and screw fixings; pvc ramps are fixed with contact adhesive only
- Connectors are available for the FRB frame for secure fixing of corners

Colour

Used to join floorcoverings of the same or similar heights. Provide safe, neat joining solutions whilst protecting the edge of the floorcoverings from damage. Often used at door thresholds where floorcoverings meet. AJC profiles are side drilled and are ideal for use as expansion joint covers.

Expansion Joint Covers

Profile Information

- Bevelled edges and serrated finish provide slip-resistance for pedestrian safety
- Economical solution for retrofit and surface mount installations between level surfaces
- Mill finish aluminium supplied in 3m lengths, pre-drilled with countersunk holes

JC881050 expansion joint cover shown with 8mm concrete sleeved anchor bolt for illustrative purposes only.

		w	Н	s	Р	MOVEMENT +/-	
APPLICATION	PROFILE	Nominal Frame Height Joint Width mm		Sightline mm	Point Load * kg	Horizontal ** mm

Finishing Trims

Used to form a neat and clean finish to the edge of a floorcovering where it either finishes or meets another floorcovering. Protects the edge of floorcoverings, prevents damage and ensures that the floorcovering does not lift and become a trip hazard.

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

Pre-punched with tabs and fixing holes for on-site curving.

Solid base for straights.

Solid base with countersunk holes for straights.

Nap Trims

Used to provide a neat edge or join between carpet and other types of floorcovering such as resilient flooring or ceramics. Certain nap trims (ANT355, CG1042 & BCT16) are also commonly used as 'binder' bars in conjunction with a stair edging (see page 55 for more details).

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

BCT18	16	Bronze Available with or without carpet gripper	2.50m 2.75m 3.20m	Polished

Edge Trims

Used to edge floorcoverings and to provide a neat join between floorcoverings such as carpet, carpet tiles, wood laminate and resilient floorcoverings. TA8 is also ideal as a day joint profile for resin floors as it is suitable for on-site polishing and finishing.

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

A range of profiles used to join and edge a variety of floorcoverings of heights from 2mm to 23.5mm. Three options available: pre-punched with tabs and fixing holes for on-site curving; solid base for straights; and perforated with fixing holes for straights and for use with ceramics. Can be used as a recessed matwell frame.

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

Construction Joint Covers

Used to provide a cover for construction joints offering a neat solution that allows minor movement to occur. Profiles are adhered using contact adhesive, applied to the solid outer sections only. Note: EJC profiles are not recommended for structural expansion joints.

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

Floor Repair Trim

Used to repair resilient floorcoverings where welded joins have failed. Utilises strips of the same floorcovering to provide an unobtrusive repair. Can be used at door interfaces to provide a robust transition. Supplied pre-drilled with countersunk holes.

CODE / PROFILE	MATERIAL	LENGTH	COLOURS / FINISHES
AVR5020 \\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\			
Shown with floorcovering for illustration purposes only (not supplied)	Aluminium	3.20m	Mill Finish

Bevelled Underlay

Used as a diminishing strip and is ideal for building up the height of resilient floorcovering to meet a thicker gauge material or a stair edging. Grooves along the underside of BU800 provide a straight cutting edge at points where the thickness gives ideal height adjustment.

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

	CODE / PROFILE	MATERIAL	LENGTH	COLOURS / FINISHES
BU200	2 65	pvc	15m coil	■ Black
BU800	see below	pvc	15m coil	■ Black

BU profiles contain up to 50% recycled content.

Dual Trim

Used to provide a neat finish to the edge of raised areas such as tiered seating in lecture theatres or display platforms in retail environments. Suitable for use with resilient floorcoverings and thin gauge carpet. Note: NOT suitable for use as a stair edging.

CODE / PROFILE	MATERIAL	LENGTH	COLOURS / FINISHES
DT50 12 12 3.5 13	PVC-u	2.50m	■ Black ■ Brown ■ Granite ■ Dove

Transition T Profiles

Used for joining different floorcoverings of the same, or slightly differing, heights. The design of the T profiles allows slight imperfections in joints and cuts to be hidden, and enables a gap between floor finishes to be incorporated during installation to allow for natural expansion in flooring materials such as ceramics and wood. Profiles can be curved on-site using a bending machine for shaped edges and inlays (see page 102). T profiles are fitted after the floorcoverings have been installed, making them ideal for use when the installation of the floorcoverings is undertaken by different trades (e.g. ceramic contractors and flooring contractors) where the trims cannot be fixed until both floors have been completed.

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

Square Edge Trims

Typically used with carpet, carpet tile, wood and wood laminate at the junction with other flooring materials such as other carpets, ceramics and wood. Provides a neat finish to floorcoverings, protecting the edges from damage and also hiding any slight imperfections in joints or cuts. Selected square edges are also available with pre-punched bases and tabs for on-site curving as indicated.

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

Wetroom Transition Strips

Wetroom transition strips are designed to be incorporated into the resilient flooring in wetrooms and shower areas in order to contain water and prevent it encroaching into dry areas. Gradus WTS wetroom transition strips are tested for slip-resistance in barefoot areas and are designed to be safe and comfortable underfoot whilst allowing wheelchair access. For larger colour swatches and LRV readings see page 78.

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

WTS1	pvc	2.00m	Coffee Lead Steel Clay Canvas
WTS2	pvc	2.00m	Coffee Lead Steel Clay Canvas
WTS3	pvc	2.00m	Coffee Lead Steel Clay Canvas

Feature Strip

Acts as a joining strip to help define walkways or separate floorcoverings of the same height. Utilises pvc insert material to add colour and design (supplied separately - see page 17 for larger colour swatches and LRV's).

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

Contour Edge

Designed to be used where a stair edging is not required and the carpet is "waterfalled" from the top to the bottom of a flight of stairs, usually in domestic applications or buildings exempt from standard building guidelines e.g. heritage buildings. It also helps to reduce wear to both the floorcovering and the leading edge of the step. Supplied pre-drilled.

Section 4

Skirtings, Capping Strips & Accessories

Information to ensure the correct selection of skirtings, capping strips and other accessories along with details of colour availability. Details of Gradus pvc skirtings, metal skirtings, cove formers and capping strips can be found in this section.

Choosing the right skirting

Area of Application

Skirtings, cove formers and capping strips are used to provide clean, neat solutions for junctions where the floor meets the wall.

Gradus offers solutions to suit most contract applications, from 'critical' clean areas where a homogeneous finish is essential such as hospital wards, treatment rooms, and food & pharmaceutical environments, through to commercial office, education or retail environments where functionality needs to be combined with aesthetics.

Healthcare, food & pharmaceutical and education environments in particular benefit from the use of pvc skirtings that can be welded to resilient floorcoverings in order to create completely impervious seals to meet cleaning and hygiene requirements.

For further guidance on the use of pvc skirtings in healthcare environments refer to: Health Technical Memorandum (HTM): Flooring 61 – 3 Design Guidance, Skirtings 3.13 - 3.19.

Materials & Profiles

Options

Selecting the correct type of skirting profile will ensure that product performance matches the environment requirements and will result in a functional, low maintenance alternative to traditional skirtings.

Pvc Skirtings

Set-in – typically used with resilient floorcoverings, this type of skirting is welded to the floorcovering in order to create an impervious seal. Ideal for critical clean areas (e.g. treatment rooms, pharmaceutical production) or areas subject to wet cleaning (e.g. school and hospital corridors). Selected set-in skirtings are available in 15m coils in order to reduce the number of vertical joints required.

Sit-on – typically used with hard floorcoverings. Ideal for use in areas where a neat, clean finish is required but an impervious seal is not required e.g. general circulation areas in schools and hospitals.

Flat – used primarily with textile floorcoverings to form a neat, low-maintenance alternative to timber skirting.

Capping Strips & Cove Formers – used when floorcoverings are continued up the wall. Cove formers ensure a consistent cove is achieved and supports the floorcovering at a weak point. Capping strips provide a neat finish where the floorcovering stops.

Stratum Pvc Skirting

An alternative to traditional timber skirting, this 10mm thick skirting provides the look of painted wood whilst offering a low maintenance solution. Ideal for creating a neat finish in non-critical clean areas, and in all contract environments where ongoing maintenance and aesthetics are important factors.

Metal Skirtings

Modern alternative to pvc or timber skirtings. Creates a modern, hi-tech finish for environments such as commercial office, retail and leisure. Low voltage cable management system also incorporated in selected profiles.

Aesthetics

Gradus skirtings & cappings are available in a range of colours and finishes to complement most interior environments.

In addition, the use of a skirting that contrasts in colour and luminance with the floorcovering can assist visually impaired people to determine the borders of the room. As a guide, skirtings should either match the wall colour, or provide a complete contrast with both the wall and floor.

For further details on visual contrast see pages 160-161, 163.

Colour Availability

Please note: Due to the limitations of the printing process, colours within this catalogue should not be relied upon for colour matching. An accurate colour match can only be achieved by requesting the relevant product sample(s) from Gradus Technical Support on 01625 428922. Stratum[™] Skirtings - Pvc

Description

The Gradus Stratum range comprises heavy-duty pvc skirting profiles suitable for a wide range of contract applications including education, healthcare and commercial office.

Life cycle analysis shows Stratum is a cost effective alternative to wood skirtings. The smooth matt finish is resistant to stains, dents and scratches, and will not splinter, chip and crack like traditional wood skirtings, offering a low maintenance hygienic solution to wall base finishing.

Stratum can be installed around gentle curves and can also accommodate and disguise minor irregularities in wall surfaces.

Profile Information

- Suitable for interior use in most areas
- Stratum is a cost effective alternative to finished timber skirting that utilises up to 80% recycled pvc in its construction and is suitable for all areas that require a high quality finish to be maintained through the life of the building
- Eliminates the need for processes normally associated with wood skirting such as sanding, priming, filling and painting

Installation Advice

- Stratum skirtings are installed to the wall using a proprietary cartridge adhesive
- Internal/external corners can be mitred on site

Colour

• For larger colour swatches see page 137

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

Stratum™ Skirtings - Pvc

redecoration is required more often.

Pvc Skirtings

Description

An extensive range of pvc skirtings, through-coloured for maximum performance and maintenance.

Profile designs are available for use in conjunction with floorcoverings from all major manufacturers.

Suitable for a wide range of commercial applications.

Installation Advice

 Pvc skirtings are secured to all wall surfaces using contact adhesive

Profile Information

- Suitable for interior use
- Set-in skirtings are ideal for use in areas subject to regular wet cleaning e.g. hospital treatment areas as they can be welded to the floorcovering to provide an impervious seal.
- Coilable set-in skirtings minimise vertical joints. Ideal in areas where both the horizontal and vertical joints require welding e.g. food preparation areas & clinical treatment areas.

The Dementia Services Development Centre at the University of Stirling have undertaken a review of the Gradus Accessories products and have rated its design in relation to dementia design principles and it's usability within a dementia inclusive environment.

Pvc Skirting FS 100 B profile is rated as Class 1a. Finishes within these ratings can be used throughout dementia applications. We recommend a minimum contrast of 30 points LRV for critical surfaces.

For further information see pages 174 to 175 or visit www.gradus.com

'P' Range Skirtings - Set-In, Sit-On & Flat

Capping Strips & Cove Formers

Description

An extensive range of pvc, PVC-u and aluminium capping strips, cove formers and accessories used where floorcoverings are dressed up the wall to form a skirting with a neat finish, and to join floorcoverings to wall finishes. Suitable for use with carpet, resilient floorcoverings and ceramic tiles. Available in choice of colours that can be used in conjunction with floorcoverings from all major manufacturers. Suitable for a wide range of commercial applications.

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

Profile

- Suitable for interior use
- Capping seals provide a decorative, neat edge where resilient floorcoverings are dressed up the wall to form a skirting.
 Available to suit resilient floorcoverings up to 5mm thick
- Carpet caps provide a decorative, neat edge where carpets are dressed up the wall to form a skirting. Available to suit carpets up to 7mm thick (compressed thickness)
- Cove formers provide a neat cove allowing floorcoverings to be dressed up the wall to form a skirting and supports the floorcovering at a weak point
- Tile caps are for use where ceramic wall tiles are finished against a resilient floor finish that has been dressed up the wall to form a skirting. Available to suit resilient flooring up to 6mm thick

Installation Advice

- Capping seals and tile caps are secured to wall surfaces using contact adhesive
- Carpet caps are secured with screws and adhesives to wall surfaces

Colour

For larger colour swatches see page 137

Capping Strips & Cove Formers

Capping Seals

Flexible pvc capping seals are used to finish the top of a resilient floorcovering where it has been coved up the wall. Capping seals are typically used in conjunction with a cove former (see page 146).

Metal Skirtings

Description

Gradus metal skirtings are available in a variety of designs and heights to suit the requirements of modern commercial environments.

Profiles are available in a range of finishes including stainless steel and aluminium.

MAS95 and MAS97 profiles have also been designed with a cable tidy feature where low voltage cables e.g. computer and telephone cables, can be hidden from view.

Which Skirting?

slimline skirting profile in either silver anodised aluminium or stainless steel.

anodised aluminium skirting profile fixed to the wall using interlocking fixing brackets.

Profile Availability

Profile designs to accommodate most floorcoverings

- Sit-on skirtings in a variety of heights 60mm, 70mm, 80mm and 100mm
- MAS90, MAS95 & MAS97 supplied in 2m lengths (anodised aluminium)
- MSS790 supplied in 2.7m lengths (stainless steel)
- Subject to lead times

Installation Advice

Visit www.gradus.com for full installation instructions

- MAS95 and MAS97 profiles are fixed to the wall using screw fixings
- MAS90 and MSS790 profiles are fixed to the wall using appropriate adhesive
- Coordinating metal or PVC-u accessories available for neat finishing on-site, see pages 148 to 149 for further details

Section 5

Associated Products for Stairs & Floors

Information on Gradus products that are typically associated with stairs and surrounding areas: slip-resistant surface finishes, tactile surface and cable ducts.

Stairtile™ - Slip-Resistant Flooring

Description

Stairtile is a rubber composite material designed to provide a hard-wearing, slip-resistant finish for stairs and floors. It can be installed in a wide range of applications such as shopping centres, car parks and other high usage circulation areas. It can be used as a complete stair covering or as an insert set into terrazzo, wood and concrete. Stairtile is suitable for use in both internal and external applications and is available in a choice of 4 colours.

When using Stairtile strips on step edges, in order to ensure that the guidance in The Building Regulations 2010: Approved Document M is followed, Gradus recommends a minimum width (front to back) of 50mm to ensure a sufficient degree of colour contrast is achieved. Stairtile must be set as close to the leading edge of the step as possible. Discs not suitable for step edges.

Profile Information

Available in a choice of 2 gauges

- 6.5mm sanded finish typically supplied to ready-prepared floor finishes
- 8.0mm sanded finish typically supplied where further site finishing is required
- To ensure slip-resistant properties are maintained, any build up of contaminants such as grease must be managed using a thorough and regular cleaning regime
- Discs not suitable for step edges as they do not form a solid band as recommended

Installation Advice

- Rebated product fitted with epoxy adhesive and screws
- Can be supplied pre-drilled (minimum profile width 20mm).
 Screw head cover plugs supplied
- Cast-in products require no mechanical fixing
- Can be installed using Gradus Grip see page 13

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

Stairtile™ - Slip-Resistant Flooring

Potential for Slip Dry Conditions Low (PTV >36) Wet Conditions Low (PTV >36) Tested using the pendulum tester (see figure 2 on page 159 for details).

Stairtile strips

OTD, OTF, OTR and OTRDG

Available in any width from 12mm to 500mm Note: minimum width for pre-drilled profiles is 20mm

Stairtile discs

Cable Ducts - Cable Management

Description

Cable Ducts combine the principle of Gradus Clip-Top functionality with the added benefit of securing loose or trailing light duty cables such as computer cables. The Workplace (Health, Safety and Welfare) Regulations 1992 recommends that "floors should be suitable, in good condition and free of obstructions. Traffic routes should be organised so that people can circulate safely". Trailing cables should be avoided, and where appropriate the use of cable ducts can help to securely fix cables and prevent accidents, whilst also preventing damage to vital cables.

Profile Information

- Reduces the risk of accidents for pedestrian traffic by providing a safe link between floorcoverings
- Ideal for use in typical office environments, cable ducts can either
 be set in to the carpet to achieve a flush finish (TD series) or fitted
 on top of the floorcovering (RD series and CD), ideal where a
 semi-permanent solution is required. All cable duct profiles, with
 the exception of CD65 (a one-piece flexible profile), are supplied
 as separate tops and bases manufactured from PVC-u which clip
 together to form the cable duct
- Suitable for interior use
- Choice of 4 colours
- Suitable for most light to medium pedestrian traffic applications e.g. offices

Installation Advice

 Examples of typical installations using Cable Ducts are shown on the opposite page

Visit: www.gradus.com to download: AutoCAD drawings, Gradus & NBS Specifications, Cleaning & Maintenance, Installation Guidelines and Health & Safety Data Sheets.

Cable Ducts - Cable Management

Flush Finish (set in to carpet)

Surface Mounted

Colour options

For an accurate colour match a physical product sample should be requested.

Safety Track™ - Slip-Resistant Finish

Description

Safety Track is a slip-resistant surface finish that can be used on ramps, walkways or anywhere where a risk of slip exists. Safety Track consists of a silicone carbide resin carrier with a self adhesive backing.

Availability

- Available in wide choice of sizes and configurations including rolls, cleats, tiles and stair treads
- Rolls are available to be cut to bespoke sizes.
 Cleats, tiles and stair treads are supplied cut to size with radius corners

25mm x 18m	1" x 60'
51mm x 18m	2" x 60'
102mm x 18m	4" x 60'
153mm x 18m	6" x 60'
305mm x 18m	12" x 60'
609mm x 18m	24" x 60'
153mm x 609mm	6" x 24"
140mm x 140mm	5½" x 5½"
20mm x 609mm	¾" x 24"
One Litre Tin	
Tube (5oz)	
	51mm x 18m 102mm x 18m 153mm x 18m 305mm x 18m 609mm x 18m 153mm x 609mm 140mm x 140mm 20mm x 609mm One Litre Tin

Information

- Suitable for interior and exterior use
- · Resistant to most common chemicals
- Suitable for use on most substrates including concrete, stone, terrazzo, wood etc. (surfaces should be primed prior to application with Safety Track primer)
- Available in Black (LRV: 4.58)
- Ideal for use on:

- Ramps - Plant and Machinery

- Walkways - Emergency Service Vehicles

- Gantries - Commercial and Agricultural Vehicles

- Landings - Marine Decking

Installation Advice

- Surfaces must be fully prepared; clean, flat, even and free from any oil, moisture or dust
- Primer is available in 1 litre tins (approximate coverage 5sq/m per tin) to assist with surface preparation.
 Where there is a danger of water penetration e.g. outdoor locations or other wet areas the use of Edge Fix sealant is recommended. Edge Fix sealant is supplied in 5oz tubes.
 Maximum adhesive strength is reached after 48 hours. Safety Track should not be installed at temperatures below 5°c
- On steps, apply Safety Track 12mm to 15mm from the step edge to prevent edge curl and premature wear.

Gradus Guarantee

All Gradus products are designed to meet the latest UK building regulations. Accessibility to buildings, as well as the provision of an inclusive environment for all, is now a requirement of The Building Regulations (ADM & ADK), BS 8300-2:2018, BS 9266:2013 & BS 5395-1:2010. Gradus actively seeks the advice of RNIB Access Consultancy Services and The Centre For Accessible Environments, and has consulted directly with Communities & Local Government (formerly the Office of the Deputy Prime Minister). Gradus is confident that all stair edgings, pvc skirtings and transition strips meet the necessary standards and, as such, building owners and specifiers can use Gradus Accessories with confidence.

Testing

- All inserts are tested for: Slip-resistance, surface roughness, chemical and bacterial/fungal resistance
- Wear test independently carried out by SATRA using the Taber Abrader Method and classified in accordance with the results shown in Figure 1
- Slip-resistance tests have been undertaken using the pendulum tester (see Figure 2). All Gradus inserts achieve a PTV of >36 to
 offer a low risk of slip (see Figure 1).

Figure 1.

Cleaning & Maintenance

A planned cleaning and maintenance programme is crucial to help maintain the performance and visual appearance of Gradus stair edgings and to maximise the lifespan of the products. Trained cleaning staff or a reputable contract cleaner should be used.

Gradus has worked with Selden Research to undertake extensive testing on all Gradus stair edgings. As a result, the method of cleaning and a range of cleaning products have been recommended for use with Gradus stair edgings in a variety of environments.

Cleaning and maintenance information for all Gradus stair edgings is available from: www.gradus.com

For further information about recommended cleaning products, including instructions for use and COSHH data sheets, contact:

Selden Research Limited, Staden Business Park, Buxton, Derbyshire SK17 9RZ Tel: 01298 26226 Email: gradus@selden.co.uk Website: www.selden.co.uk

Specification Guidelines

Colour & Contrast / Light Reflectance Values

Colour and contrast within the built environment affects accessibility of all building users, in particular those with a visual impairment.

Project Rainbow

A research project carried out by Reading University in conjunction with the Royal National Institute of Blind People (RNIB), The Guide Dogs for the Blind Association (GDBA) and ICI Paints first examined the use of colour contrast to aid navigation around the building and identified that highlighting critical surfaces and special features can provide the basis for wayfinding for visually impaired people. The 'Colour Contrast & Perception' document produced by Reading University uses light reflectance values (LRVs) to measure colour and contrast in products/surfaces and determines whether or not a suitable contrast has been achieved between surfaces.

The findings from Project Rainbow identified the following:

Special Features:

Identified as areas that need to be highlighted to allow a building to be used effectively by visually impaired people, i.e. stair edgings, handrails and door opening furniture.

'Special features are additional areas, smaller than critical features, that need to be highlighted to allow the building to be used more easily by visually impaired people. Such features include sanitary ware, handrails, door handles, finger plates, switches, socket outlets, and stair nosings etc, all of which should be contrasted against the background against which they will be seen. Smaller items such as these will need a greater colour difference from their surroundings in order to be identified.'

Trim:

'Special attention is needed to those items used in an internal environment to improve the decorative appeal and overall finish of an interior. Such items, which include coving, skirting, architrave, dado rail etc, should be decorated in colours used on larger critical surfaces.'

Critical surface: patterned carpet and no stair edgings - staircase looks like a ramp

✓

Special features: stair edgings are a different colour and luminance to the flooring to define step edges

Special features: skirting is the same colour as the wall

BS 8300-2:2018 and The Building Regulations 2010: Approved Document M

British Standard BS 8300-2:2018 states that light reflectance values (LRVs) are used to assess visual contrast using the method of measurement detailed in BS 8493:2008+A1:2010. Approved Documents M (ADM) & K (ADK) directly refers to colour and contrast in the definitions section, stating:

'Contrast visually, when used to indicate the visual perception of one element of the building, or fitting within the building, against another means that the difference in light reflectance value between the two surfaces is greater than 30 points.'

ADM then refers to Colour, Contrast & Perception - Design Guidance for Internal Built Environments, Reading University (Project Rainbow).

Light Reflectance Values (LRVs) explained

Reflectance is the proportion of light that a surface reflects compared to the amount of light that falls on the surface. An LRV is a value given to a surface to denote the amount of light reflected. Therefore, as many people with a visual impairment can perceive light and dark, LRVs are a suitable method to measure contrast.

LRVs are marked on a scale of 1 to 100 depending on the percentage of light reflected. Dark, matt and/or textured surfaces absorb a large amount of light and, therefore, have low reflectance values. On the other hand, light, glossy and/or smooth surfaces reflect the majority of light that falls on them and have high reflectance values.

Light Reflectance Scale

In order to achieve a suitable contrast between different surfaces, Project Rainbow and ADM recommend that there is at least a 30 point (not 30%) difference in the LRVs of the two surfaces.

How to Measure LRVs

The British Standard BS 8493:2008+A1:2010 specifies the method of test to determine the light reflectance value (LRV) of different surfaces of materials, including preparation of specimens in standardised conditions and results put into a test report. All relevant Gradus products have been measured using the CIE Y value and a test report is available upon request.

Previous to this standard being published, two widely used methods of measurement had been used - the CIE L value (fluorescent light) and the CIE Y value (natural daylight), causing confusion and potentially dangerous specifications. This standard has adopted the CIE Y value as the single consistent method of measurement for LRVs that is to be used across all industries.

What the colour & contrast guidelines mean for Gradus flooring accessories:

Stair Edgings

BS 8300-2:2018: 'Each step nosing should incorporate a durable permanently contrasting continuous material for the full width of the stair on both the tread and the riser to help people who are blind or partially sighted appreciate the extent of the stair and identify individual treads. The contrasting material should extend 50mm to 65mm in width from the front edge of the tread and 30mm to 55mm from the top of the riser, and should contrast visually with the remainder of the tread and riser.'

ADM: 'All nosings are made apparent by means of a permanently contrasting material 55mm wide on both the tread and the riser.'

Colour, Contrast & Perception (Project Rainbow): 'The nosing of every step in a flight of stairs should be adequately colour or luminance contrasted with the remainder of the step and the floor coverings adjacent to the top and bottom of the flight.'

Skirtings

BS 8300-2:2018: 'To avoid giving the wrong impression about the size of a room, skirtings should have the same LRV as the wall so that the junction between the skirting and the floor marks the extent of the room.'

Colour, Contrast & Perception (Project Rainbow): 'Skirting should be either decorated the same colour as the wall, the same colour as the floor or, if different to one or the other or both, must be decorated in a colour which highlights even further the junction.'

Specification Guidelines

The Building Regulations and British Standards specifying the right Gradus product

The Building Regulations and British Standards are designed to ensure the optimum specification of products through a combination of legislative requirements and guidance. The following extracts have been taken from The Building Regulations 2010 and British Standard BS 8300-2:2018, BS 9266:2013, BS 5395-1:2010 and show how Gradus products can be used to help satisfy these requirements, and help achieve an inclusive environment in line with the Equality Act 2010. For further details on this or any other aspect of The Building Regulations and British Standards contact Gradus Technical Services on 01625 428922. Guidance varies internationally, please refer to the relevant countries' building standards (or equivalent) before specification. Extracts shown below represent examples of good practice.

BS 8300-2:2018

Design of an accessible and inclusive built environment

Part 2: Buildings - code of practice

Guidance on Stair Edgings

- 10 Vertical movement
- 10.1 Steps and stairs
- 10.1.4 Identification and slip resistance of nosings

Each step nosing should incorporate a durable, permanently contrasting continuous material for the full width of the stair on both the tread and the riser to help people who are blind or partially sighted appreciate the extent of the stair and identify individual treads 1. The contrasting material should extend 50 mm to 65 mm in width from the front edge of the tread and 30mm to 55mm from the top of the riser, and should contrast visually with the remainder of the tread and riser 2.

NOTE 1 Particular care is needed to ensure that there is adequate contrast between nosings and landings 0.

NOTE 2 Nosing that wraps around the riser might assist people who are blind or partially sighted 3.

NOTE 3 A proprietary nosing can provide a durable solution that satisfies both visual contrast and slip resistance criteria (see BRE IP 15/03).

The whole tread or the nosing should incorporate a slip-resistant material.

NOTE 4 Guidance on slip resistance of surfaces is given in Annex C.

Surface material tread and risers should be free from patterning.

NOTE 5 It is beneficial that surface material at landings and floors contrasts with surface material of stairs, subject to maintaining visual contrast at top and bottom nosings.

- All Gradus stair edging colours have been measured to provide Light Reflectance Values (LRVs)* in order to provide the specifier with information to ensure that suitable contrast is achieved with the surrounding stair material. PVC-u Hardnose stair edgings can provide an ideal solution as channel and insert colours can be matched to contrast with the tread and riser (see pages 40 to 45).
- * These values have been determined using the CIEY value, in accordance with BS 8493:2008+A1:2010 see pages 160 to 161 for further details.
- **2** The profile dimensions stated are guidance only and other factors should be taken into consideration when specifying stair edgings such as step dimension and type and frequency of traffic. However, a large proportion of Gradus stair edgings fall between the dimensions stated, including the XT range (see pages 21 to 22 and 41 to 42).
- **9** The XT range of stair edgings features a slip-resistant PVC insert that extends around the leading edge of the profile to ensure that foot contact is always made with the slip-resistant element of the stair edging, providing the ideal solution for reducing the risk of slips, trips and falls on stairs in line with BRE recommendations. The XT range is available in aluminium (see pages 21 to 22) and PVC-u Hardnose (see pages 41 to 42).

10 Vertical movement

10.1 Steps and stairs

10.1.7 Surface materials

The surface materials used for internal steps and stairs should be chosen to be easy to maintain and as slip-resistant as possible, especially if surfaces are likely to become wet due to location or use, or if spillage occurs.

NOTE 1 Advice and further references on slip resistance of surfaces are given in Annex C.

A choice of slip-resistant insert materials is available for all Gradus stair edgings. Xtra-grip and Xtra-grip Plus inserts have been specifically designed to reduce the risk of slip in internal wet areas or where spillages are likely to occur (see page 14 for advice on specifying the most suitable insert).

Annex CSlip potential characteristics of treads, ramp surfaces and floor finishes

C.2 Slip resistance

The following indices are used to indicate the slipperiness of surfaces:

a) pendulum test values (PTVs) obtained using a pendulum tester in line with BS 7976-2;

b) surface micro roughness (Rz) measurements using a stylus instrument in accordance with BS 1134.

Detailed information on assessing slip resistance, together with a table illustrating common surface materials and their dry and wet slip resistance values (SRV), also known as pendulum test values (PTV), can be found in BS 5395-1:2010, Clause 7.

NOTE Depending on the precise nature of the wearing surface, seemingly similar products made from the same material can be totally different in terms of their slip potential characteristics.

C.4 Step nosings

Where slip resistance is required for nosings and treads, the slip resistance needs to be equivalent to that expected for level surfaces. A PTV greater than 36 is considered to be suitable, as pushing and turning are unlikely on stairs. On existing nosings, the slip resistance of step nosings are generally expressed by their Rz roughness value as PTV is difficult to measure. In such cases a roughness Rz value of 20 μ m is considered to be suitable.

All Gradus stair edging inserts are tested for slip-resistance using the pendulum tester – all inserts have a low slip potential (inserts measured in dry conditions - PTV of >36; inserts measured in wet conditions – PTV of >36). All inserts are also tested for wear, surface roughness, chemical resistance and bacterial/fungal resistance (see page 159 for further details).

Guidance on Skirtings

11 Surface finishes

11.1 Visual characteristics

The LRV of a wall should be 30 points different from that of the ceiling and of the floor. To avoid giving the wrong impression about the size of a room, skirtings should have the same LRV as the wall so that the junction between the skirting and the floor marks the extent of the room, except where coved skirtings are used, where the skirting should have the same LRV as the floor and should extend not more than 100mm above finished floor level.

All Gradus skirting colours have been measured to provide Light Reflectance Values* in order to provide the specifier with information to ensure that the skirting can be matched to the wall and contrast with the floor.

* These values have been determined using the CIEY value, in accordance with BS 8493:2008+A1:2010 – see pages 160 to 161 for further details.

Permission to reproduce extracts from British Standards is granted by BSI Standards Ltd (BSI). No other use of this material is permitted. British Standards can be obtained in PDF or hard copy formats from the BSI online shop: www.bsigroup.com/Shop

Design of accessible and adaptable general needs housing - Code of Practice.

The requirements of a dwelling's occupants can change as a result of accident, illness or ageing, giving rise to reduced mobility or increasing sensory loss. In order to meet these changing requirements, homes need to be accessible and adaptable; accessible for both visitors and residents and adaptable to meet residents' changing needs both temporary and longer term.

The standard outlines recommendations for design features which can be incorporated when the dwelling is first built, or have provision made at the outset for their future adaptation. This helps reduce the need for expensive or disruptive alterations or substantial adaptations in the future.

This British Standard gives recommendations for methods of selection, planning, installation and maintenance for both stair nosings and barrier matting. Gradus advice and recommendations are shown in blue text.

Guidance on Stair Edgings

- 6 External access routes
- 6.8 Steps on access routes
- 6.8.1 Stepped access routes to individual houses

All step nosings should incorporate a permanently contrasting continuous material for the full width of the stair on both the tread and the riser. The material should contrast visually with the remainder of the tread and riser 1.

• All Gradus stair edging colours have been measured to provide Light Reflectance Values (LRVs)* in order to provide the specifier with information to ensure that suitable contrast is achieved with the surrounding stair material. PVC-u Hardnose stair edgings (see pages 40 to 45) can provide an ideal solution for internal applications as channel and insert colours can be matched to contrast with the tread and riser.

*These values have been determined using the CIE Y value, in accordance with BS 8493:2008+A1:2010 - see pages 160 to 161 for further details.

NOTE 2 A contrasting nosing at the junction between tread and riser might assist people with a visual impairment.

NOTE 3 Further information on the design of steps, and on visual contrast, refer to BS 8300-1:2018, BS 8300-2:2018

6.8.2 Stepped access routes to blocks of flats

All step nosings should incorporate a permanently contrasting continuous material for the full width of the stair on both the tread and the riser, to help people with a visual impairment appreciate the extent of the stair and identify individual treads 1.

• All Gradus stair edging colours have been measured to provide Light Reflectance Values (LRVs)* in order to provide the specifier with information to ensure that suitable contrast is achieved with the surrounding stair material. PVC-u Hardnose stair edgings (see pages 40 to 45) can provide an ideal solution for internal applications as channel and insert colours can be matched to contrast with the tread and riser.

*These values have been determined using the CIE Y value, in accordance with BS 8493:2008+A1:2010 - see pages 160 to 161 for further details.

The material should be 50 mm to 65 mm wide on the tread and 30 mm to 55 mm on the riser, and should contrast visually with the remainder of the tread and riser 2.

2 The profile dimensions stated are guidance only and other factors should be taken into consideration when specifying stair edgings such as step dimension and type and frequency of traffic. However, a large proportion of Gradus stair edgings fall between these dimensions stated, including the XT range (see pages 21 to 22 and 41 to 42) for internal use and the TEX range of heavy duty stair edgings (see page 33) suitable for external use.

The whole tread and the nosing should incorporate a slip-resistant material, starting as close as practicable to the front edge of the nosing and extending the full width and depth of the tread 3.

1 Gradus offer a Heavy-Duty Stair & Floor system suitable for heavy traffic exterior and interior environments (see page 35). The system features stair edgings and tread plates for use on stairs and sheet material for use as a floorcovering on landings and walkways to help reduce the risk of slips and trips in the most demanding environments.

NOTE 1 A proprietary nosing can provide a durable solution that satisfies both visual contrast and slip resistance criteria (see BRE IP 15/03 [12]).

NOTE 2 Further information on slip resistance is given in BS 8300-1:2018, BS 8300-2:2018

8 Communal areas within blocks of flats

8.2 Design of common steps and stairs

The design of common steps and stairs should conform to 6.8.2

Continued...

Guidance on light reflectance values

8.5 Visual contrast between surfaces or building elements

Differences in light reflectance value (LRV) should be used to assess the degree of visual contrast between surfaces such as floors, walls, doors and ceilings, and between key fittings/fixtures and surrounding surfaces.

NOTE

Relevant LRV differentials and methods of LRV measurement are provided in BS 8300-1:2018, BS 8300-2:2018 - Annex B.

Visual contrast is used to indicate the visual perception of one element of the building, or fitting within the building, against another to ensure the difference in light reflectance value between the two surfaces is greater than 30 points. All Gradus stair edging colours have been measured to provide Light Reflectance Values* in order to provide the specifier with information to ensure that suitable contrast is achieved with the surrounding stair material. *These values have been determined using the CIE Y value, in accordance with BS 8493:2008 - see pages 160 to 161 for further details.

British Standards can be obtained in PDF or hard copy formats from the BSI online shop: www.bsigroup.com/Shop or by contacting BSI Customer Services for hard copies only: Tel: +44 (0) 845 086 9001, Email: cservices@bsigroup.com

The Building Regulations 2010

- Approved Document K 2013 edition

Protection from falling, collision and impact

This approved document takes effect on 6th April 2013 for use in England. Current building standards should be checked at time of specification for Wales, Scotland and Northern Ireland.

Approved documents are intended to provide guidance. The main points relating to stairs that are detailed in Approved Document K are shown below with supporting recommendations by Gradus shown in blue text.

K1 Stairs and ladders

Construction of steps

For buildings other than dwellings

1-7 For steps apply the following guidance.

a. Make step nosings apparent: use material that will contrast visually, a minimum of 55mm wide, on both the tread and the riser

For common access areas in buildings that contain flats

1-10 Provide a stair with steps that comply with the following guidance.

a. Make step nosings apparent: use material that will contrast visually, 50mm to 65mm wide on the tread and 30mm to 55mm on the riser.

All Gradus stair edging colours have been measured to provide Light Reflectance Values (LRVs)* in order to provide the specifier with information to ensure that suitable contrast is achieved with the surrounding stair material. PVC-u Hardnose stair edgings can provide an ideal solution as the channel and insert colours can be matched to contrast with the tread and riser (see pages 40 to 45).

*These values have been determined using the CIE Y value in accordance with BS 8493:2008+A1:2010 - see pages 160 to 161 for further details.

The profile dimensions stated are guidance only and other factors should be taken into consideration when specifying stair edgings such as step dimension and type and frequency of traffic. However, a large proportion of Gradus stair edgings fall within the dimensions stated, including the XT range (see pages 21 to 22 and 41 to 42).

Source: Building Regulations - Protection from falling, collision and impact - Approved Document K - 2013 Edition. Crown Copyright material is reproduced with the permission of the Controller of HMSO and the Queen's Printer for Scotland.

The Building Regulations 2010 - Approved Document M "Access to and use of buildings"

(2015 edition incorporating 2016 amendments – for use in England)

The latest version of Approved Document M is stated 'for use in England'. Current building standards should be checked at time of specification for Wales, Scotland and Northern Ireland.

Approved Document M is split into two parts:

- Volume 1: Dwellings
- Volume 2: Buildings other than dwellings

Volume 1 refers to Approved Document K for specific guidance notes on stair edgings (detailed on page 165). The below abstracts of guidance are taken from Volume 2.

Building owners have a legal duty to ensure all people can gain access to and use a building and its facilities.

Approved documents are intended to provide guidance and much of the guidance in Approved Document M is based on BS 8300. The main points relating to stair and stepped access that are detailed in Approved Document M are shown below, with supporting recommendation by Gradus shown in blue text.

Stepped Access

1-27 People with impaired sight risk tripping or losing their balance if there is no warning that steps provide a change in level.

Use of a stair edging that contrasts with the surrounding tread/riser material will help to clearly define the step edge and warn of a change in level.

1-29 Materials for treads should not present a slip hazard, especially when the surface is wet.

Gradus provides a range of inserts for use in interior (dry and wet) and exterior conditions (see page 14).

1-30 People should easily be able to appreciate where to place their feet by highlighting nosings and avoiding open rises.

Use of a stair edging that contrasts with the surrounding tread/riser material will help to clearly define the step edge. Both the insert and channel of the stair edging should be of a suitable contrast to the surrounding floor finishes. ADM directly refers to colour contrast in the definitions section stating that:

'Contrast visually, when used to indicate the visual perception of one element of a building, or fitting within the building, against another means that the difference in light reflectance value between the two surfaces is greater than 30 points.'

All Gradus stair edging colours have been measured to provide Light Reflectance Values* in order to provide the specifier with information to ensure that suitable contrast is achieved with the surrounding stair material.

*These values have been measured using the CIE Y value in accordance with BS 8493:2008+A1:2010. See pages 160 to 161 for further details

1-33 (i) All nosings are made apparent by means of a permanently contrasting material 55mm wide on both the tread and the riser.

The 55mm dimension detailed is guidance only and other factors should be taken into consideration when specifying stair edgings such as step dimension, type and frequency of traffic. Communities and Local Government (formerly The Office of the Deputy Prime Minister) also acknowledges that advice given by other expert bodies should be taken into consideration, for example the RNIB Access Consultancy Services who state that the ideal dimension for a stair edging is 55mm on the tread and 30-50mm on the riser, which takes into account lower risers where a 55mm stair edging may take up a large proportion of the riser surface and therefore could be confusing for partially sighted people. If 55mm profiles are required they are available in the Gradus range (see pages 21, 25, 28, 33, 41, 42 and 43).

Entrance Lobbies

2-29 (e) floor surface materials within the lobby do not impede the movement of wheelchairs e.g. not coir matting, and changes in floor materials do not create a potential trip hazard.

The majority of Gradus mats are suitable for use with wheelchairs.

2-29 (f) the floor surface helps to remove rainwater from shoes and wheelchairs.

A combination of Gradus primary and secondary barrier matting will help prevent the ingress of rainwater.

2-29 (g) where matwells are provided, the surface of the mat is level with the surface of the adjacent floor finish.

Gradus offers a range of matwell frames and primary barrier mats designed to work together to provide a smooth transition to the surrounding floor finish.

Corridors and Passageways

3-12 In order to help people with visual impairment to appreciate the size of a space they have entered, or to find their way around, there should be a visual contrast between the wall and floor.

Gradus skirting profiles are available in a wide choice of colours and will provide a suitable colour contrast, helping define where the floor ends and the wall begins.

Source: Building Regulations - Access to and use of buildings - Approved Document M - 2015 edition including 2016 amendments. Crown Copyright material is reproduced with the permission of the Controller of HMSO and the Queen's Printer for Scotland.

Stairs - Part 1:

Code of practice for the design of stairs with straight flights and winders

This standard provides guidance or good practice in the design of stairs with straight flights and winders. Gradus advice and recommendations are shown in blue text

4 Safety

4.7 Marked nosings

On a normal-use stair, each step or landing nosing should incorporate a permanently contrasting material for the full width of the stair on both the tread and the riser to help blind and partially sighted people appreciate the extent of the stair and identify individual treads. The material should be 50 mm to 65 mm wide on the tread and 30 mm to 55 mm on the riser, and should contrast visually with the remainder of the tread and riser.

NOTE Advice on visual contrast can be found in BS 8300-1:2018, BS 8300-2:2018 - Annex B.

All Gradus stair edging colours have been measured to provide Light Reflectance Values (LRVs)* in order to provide the specifier with information to ensure that suitable contrast is achieved with the surrounding stair material. PVC-u Hardnose stair edgings can provide an ideal solution as channel and insert colours can be matched to contrast with the tread and riser (see pages 40 to 45.

*These values have been determined using the CIE Y value, in accordance with BS 8493:2008+A1:2010 – see pages 160 to 161 for further details.

The profile dimensions stated are guidance only and other factors should be taken into consideration when specifying stair edgings such as step dimension and type and frequency of traffic. However, a large proportion of Gradus stair edgings fall between these dimensions stated, including the XT range (see pages 21 to 22 and 41 to 42).

7 Slip resistance

Treads and landings should have a surface (and proprietary nosing, if provided) that does not become slippery in use.

Assessments in slip resistance should be undertaken using a combination of the following:

- a) Pendulum test value (PTVs) obtained using a pendulum tester in line with BS 7976-2; and
- b) Surface micro roughness measurements using a stylus instrument in accordance with BS 1134-1.

NOTE 1 Attention is drawn to the information found in the UK Slip Resistance Group Guidelines [6].

NOTE 2 Any flooring material providing sufficient slip resistance for use on the level, typically with a PTV greater than 36, is suitable for use on stairs.

PTV should be measured in the conditions to which the stair is likely to be exposed.

If strips or inserts are used to improve the slip resistance of steps and stairs, they should be fitted as close possible to the leading edge of the tread and should be of a contrasting colour/brightness. An Rz roughness of 20 um or more is recommended. Such strips or inserts should be firmly fixed.

NOTE 9 For further information on proprietary nosings see BRE IP 15/03 [7].

All Gradus stair edging inserts are tested for slip-resistance using the pendulum tester – all inserts have a low slip potential (inserts measured in dry conditions - PTV >36; inserts measured in wet conditions – PTV >36). All inserts are also tested for wear, surface roughness, chemical resistance and bacterial/fungal resistance (see page 159 for further details).

The XT range of stair edgings features a slip-resistant pvc insert that extends around the leading edge of the profile to ensure that foot contact is always made with the slip-resistant element of the stair edging, providing the ideal solution for reducing the risk of slips, trips and falls on stairs in line with BRE. The XT range is available in aluminium (see pages 21 to 22) and PVC-u Hardnose (see pages 41 to 42).

Permission to reproduce extracts from British Standards is granted by BSI Standards Ltd (BSI). No other use of this material is permitted. British Standards can be obtained in PDF or hard copy formats from the BSI online shop: www.bsigroup.com/Shop

UK Slip Resistance Group

Gradus is a key contributor to the UK Slip Resistance Group, the leading independent authority on slip resistance in the UK that aims to promote greater understanding of the causes of and solutions to slips.

A new guide is now available entitled "What Makes Stairs Safer?" that offers an overview of the key aspects involved in creating safe internal stairs and aims to provide valuable, independent advice to anyone involved in the design, specification, construction, installation, fitting or maintenance of stairs.

For more information and to keep up-to-date with the latest developments, visit: www.ukslipresistance.org.uk

BRE - Research and Guidelines

BRE has published an information paper (ref. IP15/03) entitled "Proprietary nosings for non-domestic stairs". This paper provides guidance to designers and building managers on the best way to assess the types of proprietary nosings that should be provided on non-domestic stairs.

Gradus has combined the key findings of this report with in-house research and development, and as a result has developed the XT range of profiles.

Detailed below is an overview and summary of the key findings in the BRE information paper.

Overview

The study considered the dynamics of pedestrian stair use. Previous studies have shown that 80% of slips on stairs are likely to occur when users are descending the stairs. This usually occurs as a result of an overstep (i.e. when a substantial portion of the foot overhangs the tread). Therefore as the going (tread width) becomes narrower the likelihood of a slip incident becomes greater. Where the going is less than 300mm the risk of slip is increased. Most non-domestic stairs have a going of between 250mm and 280mm. The risk of slip is further increased if the tread surface is smooth, becomes wet or there is a lack of clear colour contrast at the step edge.

Conclusion

The application of a proprietary nosing may reduce the risk of slipping against the factors highlighted above. The proprietary nosing should incorporate a slip-resistant material that should extend to the point at which it meets the vertical face to minimise the risk of slip in descent. Proprietary nosings should all offer a colour contrast to clearly highlight the step edge.

Gradus recommendation

The XT range of stair edgings (see pages 21 to 22 and 41 to 42) offers a new edge in safety for stairs and has been developed to take into account the latest guidance contained in the BRE information paper IP15/03, BS 8300-2:2018 and in The Building Regulations 2010 - Approved Document M.

Extracts from BRE Information Paper IP15/03, Proprietary nosings for non-domestic stairs, copyright BRE, reproduced by permission. IP15/03 is available from IHS BRE Press, Bracknell RG12 8FB, www.ihsbrepress.com

The GRADUS Knowledge

CPD

- The Specification & Design Considerations of Stair Edgings
- The Specification & Design Considerations or Barrier Matting Systems
- \bullet The Specification & Design Considerations or Wall, Corner & Door Protection Systems

All seminars are part of the RIBA core curriculum syllabus and earn double CPD points for those attending the seminars. For further information contact Gradus Technical Support on 01625 428922 or use the Contact Us form on our website.

Seminar

The Gradus Knowledge seminar is an informal opportunity for Gradus to bring an exhibition of products directly to you.

We have designed them to be flexible and informative and they can be arranged at a time and date to suit you. They typically last around 2 hours and during this time people can drop in as they wish. Gradus personnel are available to discuss our products generally or address specific requirements.

They are often booked over lunch time and we are happy to work with you to provide lunch, or if you prefer a different time, a variety of snacks. Call 0800 021 4534 to book your Gradus Knowledge seminar or email: imail@gradus.com

GRADUS A Gerflor company

Maddinin.

FUNDAMENTALS

A FUSION OF PRODUCTS & VALUES

Gerflor and Gradus offer products which are ideal for use in a wide variety of applications including healthcare, commercial office, education, retail, hospitality & leisure and housing. Products can be combined to provide a complete package that balances performance, aesthetics and cost alongside environmentally responsible manufacturing processes.

A FRESH APPROACH

We believe passionately in providing the customer with the very best in terms of service. Through our combined team we can offer expert advice to help with product selection backed up with extensive UK stocks to ensure our products are delivered on-time, every-time. A NEW LEVEL

See through their eyes

A guide to inclusive design for independent living

People with dementia see the world differently. What may look 'normal' to us could potentially disorientate them, causing distress or even injury. As a result, the buildings they use must be designed with a deep understanding of the ways in which those with dementia will experience them – from the types of materials used to the interplay of different colours.

Why is designing for independent living important

The ONS in 2018 highlighted that the UK has an aging population.

Age UK estimate that:

- There are currently 12 million people aged 65 and over
- 5.5 million aged 75+
- 1.6 million aged 85+
- By 2030 it is anticipated that over 21% of the population will be over 65

The number of years of life expected to be spent without a disability or in good health is commonly referred to as disability-free life expectancy or healthy life expectancy (ONS, 2018). The likelihood of being disabled and / or experiencing multiple chronic and complex health conditions increases with age (ONS, 2018). In general, a person living with dementia tends to be older - age is the biggest risk factor for developing a disease that causes dementia. It is important therefore that designers consider the needs of the older generation and start to plan and design for independent living for today, tomorrow and the future.

A fusion of products

A number of Gradus and Gerflor products have been accredited by the world-leading Dementia Services Development Centre at the University of Stirling for use in dementia living areas.

Flooring Accessories and Matting

Carezone Carpet

Wall Protection

Taralay Impression Control Safety Flooring

Dementia designs on demand

We know that designing for people living with dementia is not easy, so we have developed a comprehensive design tool that will help you to create a safer environment for independent living.

The App helps specifiers through the design process by ensuring that their projects consider Inclusive Dementia Design to promote independent living.

Products include:

Carpet and vinyl, entrance matting, floor trims, skirtings, wall protection & handrails and stair edgings.
